

a Frontal Attack on the Misguided Astronomy

The Cosmos here presented is the Cosmos
of Reality, of Life, incessantly changing,
renewing, flowing into the future.

The here baptized “bio-cosmology” is totally
contrarian to the presently reigning cosmic
theories, construed around dead materials
and deprived of any signal of life.

Either join in the future of bio-cosmology or stay
with your lifeless Cosmos, there is no way between.

Life does not sprout from dead matter.
Big Bang never was, nor could have been.
Although un-defined, “Time” appears in multiple equations.
The Universe is not a one volume structure.
The MWBR is not the birth place of the Universe.
Red-Shift is not any longer indicative of Universal expansion.
Particles have never properly been proven to exist.
Light and e.m. waves do not travel on their own account.
Gravity is not mass attracting mass.
95% of Universal content still not identified.

Whereas in the

“The Cosmos of Time” (author’s achievements ^{x)} marked)

For the first time ever an unassailable **Definition of “Time”**,
was coined ^{x)}. Upon which the below described ^{x)} revolutionary
new structure of the Universe was developed.

[www.Defini\(on-of-Time.com](http://www.Defini(on-of-Time.com)

The border between future and past is a two-dimensional
time-sheet, flat and straight, that advances steadily from
the past into the future. Being two-dimensional, it is
either past or future, with nothing in between. And as the
Universe is embedded in the time-sheet, also the advance
into the future by the Universe and all it contains is

solidly coupled with the time-sheet's advancement. As the time-sheet, being two-dimensional, is incapable to propel itself into the future, there has to be a onedirectional, thus first-dimensional **force**, to propel the time-sheet, *inclusive our Universe*, into the future, called the **Force of Time**.

Time is the Force that propels the whole Universe and all it contains into the future. ©

The Universe consists of **the three dimensions of 'Time'** layered in steps of mathematical power ^{x)}, as per Maxwell:

T_a the **Force of Time** ^{x)}, **T_a²** the **Matrix Sphere of Time** ^{x)} and **T_a³** the surrounding **electro-magnetic Mantle** ^{x)} of Time.

From a **Point Zero**, the Spirit or **Force of Time T_a** pushes the **Matrix Sphere T_a²** and its surrounding electro-magnetic **Mantle T_a³ with all it contains** into the future. At the same time keeping both the Matrix and the Mantle loaded with energy.

Astro-Jets ^{x)} suck up **energy from the Matrix, fuse the energy and encapsulate it** ^{x)} into **matter** in the form of **atomic hydrogen H₁**, that they then shoot out and inject into the highest layers of the e.m. Mantle,

The Astro-Jets action creates a counter force, the **Recoil Force** ^{x)} that first builds the **H₁** up into the most complex kinds of matter only to pull all the same at the end back into the Matrix as pure reconstituted energy (recoil replaces gravity)

As the Recoil's *Force* increases in strength, from the highest layers of the Mantle back down toward the Matrix, so will the reentry *speed* of the matter increase on a parabolic scale, as the **Redshift** variations between the descending objects show.

Universal Metabolism ^{x)} from pure energy into matter and back into pure re-usable energy. Where the Astro-Jets lead the way up from the Matrix's energy fields into matter and the Recoil Force leads the way for all matter once created to accelerate backdown into the Matrix.

As the Astro-Jets do spout irregularly, in different quantities and force, at different times, from different locations, the newly created matter, will get thoroughly mixed and separated in **layers** ^{x)} that often overlap on their descend back toward the Matrix.

Recoil descend ^{x)}

In the higher, greater part of the Mantle, where the Recoil Force is still weak, the spewed dust and gasses swirl around in suspense in mixing turbulence. Only after the Recoil will have passed the border of the 40% (estimated) down- leg, in now rapidly increasing strength, will the dust and gas clouds begin to cluster. On the macro side from globular galaxies and first generation suns into spiral galaxies, on into solar systems and planets. On the micro side: from simple atoms to molecules, to complex molecular systems, to organics, to life.

From dust and gases into liquids and mud, into soft stones, all prone to harden over time.

Two million years ago the first humans were still in the stone age. And **the surface “stones” at the time** were still soft and not yet solidly baked by Nature into heavy, hardened rocks. **The Earth surface was still spongy**, covered by the latest rains of cosmic, mostly muddy, matter. ^{x)}

At the time humans managed well with bronze tools. They build whatever with the same ease as the Eskimos of today still cut snow-blocks to size and staple them up into igloos where time and weather harden them to ice-blocks.

After the Pyramids, the use of big stones, as they got heavier and harder, declined rapidly. Thus today we work exclusively with bricks, cement, aluminum and plastics! In general, the heavier the stones found on archeological sites, the older the ancient culture must have been.

Be prepared!:

The rapidly shortening time spans of geological change recently noticed and the increasing heaviness of matter show, that **our Earth might be nearing its final steep fall back into the Matrix sooner** than we might think! May be in 30.000 years already!

Our Universe is not kind of stationary, where age-old dead rocks float around in chaos. Bashing into one another at random! But a highly organized **Living Universe ^{x)}** and for sure with all needed ingredients available **to be intelligent too**. Where all and everything is inter-connected by the Flow and Spirit of Time. *Panta Rei*, everything flows as Pythagoras said.

The Force, the Flow of Time connects everything in the Universe with one another. Besides the energy flows in the first and second dimensions that are hidden for us humans, - all the light messages we can see, and all e.m. messages, do not flow in waves or photons moved by their own local energy sources, but **piggyback**

on the absolute, relentless advancement of the Force of Time. ^{x)} It is this piggybacking on the advancing **Time** that **keeps every point in the Universe informed** about all other regions and the changes in the Universe **uniting all.** ^{x)}

Summary of the achievements of the Cosmos of Time:

- A definition of Time: the Force of Time, the advancing Matrix Sphere of Time and e.m.Mantle of Time.
- Astro-Jets fusing Energy into Matter.
- Recoil Force replacing Gravity.
- Redshift: from an expanding Universe to a Metabolic Universe.
- Parabolic descend: accelerating.
- Recycling of matter into re-usable energy.

To be is to change:

Panta Rei, everything flows with Time: From the injections of the 1-dim. time-digits, to the flow of 2-dim. time-electric waves, from there into the 3dim waves of our visual Universe, to fall back again into the Matrix as 2-dim waves.

Time creates, growth, maintains and re-takes, Time is the Force that governs all.

All the above will bring revolutionary changes in Science's present outdated views of astronomy, cosmology, geology, history and science in general.
